

# Non-smartcard login for iPads

## How to disable smartcard requirement in specified Sun Ray terminals

Usually, Sun Ray servers are configured so on all Sun Ray terminals (DTUs) require a Smart Card for any user to access their desktops.

This can be disabled for specific DTUs, like soft clients, e.g. iPad's.

- First, set up a policy to allow non-smartcard access for registered tokens

```
vdil # /opt/SUNWut/sbin/utpolicy -a -m -r both -u both -k both -g
```

- Now, register a pseudo-token for any soft client. The generated pseudo tokens can be seen in the session view of the GUI or in `/var/opt/SUNWut/log/messages`.
- Copy the string that starts with pseudo and navigate to Tokens / New. Paste the pseudo token and enter a username.
