

creating new VMs on LBO VMware servers

Step-by-step guide

1. [create new iSCSI target on bsd1](#)
2. vSphere Client: Configuration - Storage Adapters - Rescan iSCSI adapter, verify new target. It may take some minutes for the new target to appear.
3. New "custom" VM on datastore bsd1-datastore, Disk: Raw device mappings, choose new target.
4. Take care the network adapter is located on VMware-Network, not Filer-Network.
