

# creating new iSCSI targets on FreeBSD

## Step-by-step guide

1. `[root@bsd1 ~]# zfs create -V 64G tank/esxi/XXX`
2. `vi /etc/ctl.conf, new target`
3. `service ctld reload`
4. check with `ctladm devlist`

It may take some minutes for the new target to appear in "ctladm devlist".
